Database
1. Open /admin/identity-verifications
2. Click View on a request row
3. openDetail(document)
4. Render the front document image
loop
[viewing.backFileUrl]
5.1. Show the back side of the document
6. Render reviewNotes, the AI scan section (badge, score, OCR, quality, reasons) and the duplicate warning
alt
[viewing.status == 'PENDING']
7.1.1. Show the detail dialog with the review actions
[viewing.status != 'PENDING']
7.2.1. Show the detail dialog as read-only
8. No detail API call - the dialog renders from the row data returned by the list
9. GET /api/backend/admin/identity-verifications/:id/file
10. Forward the request to file()
11. getLocalFile(id)
12. findDocumentRaw(id)
13. findFirst
14. Execute query
15. Return the document or null
16. Return the document or null
17. Return the document or null
18. getLocalFileBySide()
19. Return { absolutePath, fileName }
20. Content-Disposition: inline + Content-Type
21. Stream the file
22. Return 200 - the image bytes are rendered by the tag
23. [viewing.backFileUrl] the same flow runs for /backFile via getLocalBackFile()
opt
[local file is missing or invalid]
alt
[fileUrl is not a local:// URL]
24.1.1. [fileUrl is not a local:// URL] throw IdentityVerificationFileInvalidException (400)
[fileUrl is a local:// URL]
24.2.1. The request fails - the dialog has no fallback placeholder
