packages/
packages/ui
shared React components
buttons · dialogs · tables · form controls
imported by apps/web only
packages/shared-type
Zod request / response models
enumerations · permission names
error codes shared by both apps
packages/typescript-config
strict TypeScript baselines
packages/eslint-config
one lint ruleset for the monorepo
Dependencies point downwards: the two applications depend on the packages, and a package never imports from an application.
No route module of apps/api imports another route module; cross-module data flows through the Prisma schema.
